

a Study object and boundary

b Coordinate and tested curve

c Portability domain

d Evidence ladder and claim level

Benchmark support

Coordinate support	pass	cross-fitting + controls
Portability	bounded	4 positive; DK edge
Model benchmark	use case	NSE/KGE differ

Mechanism boundaries

Artifact floor	limit	$AR(1) > \text{observed}$
Storage evidence	mixed	proxy/state mixed
GW / tracer	unclosed	causality open

Main claim: bounded diagnostic benchmark for catchment timescale structure.
